

Get the most out of your heat pump.

Clean **FILTERS** regularly. When your heat pump is running at its best, you'll realize maximum comfort and savings.

Set the **MODE** to heat or cool for greatest efficiency. Use the auto setting for the **FAN**, so your system can adapt as indoor and outdoor conditions change.

For optimal **COMFORT** at a standing or seated level, you may need to adjust the temperature up or down depending on the season.

Heating with a ductless heat pump is comparable to heating with oil at \$1.50 a gallon. So let the heat pump do the work to increase your **SAVINGS**.
